

Medi-Shower™ System

Medi-Shower™ System

This system has been developed in consultation with experts in the field of Legionella control as a way of resolving hygiene issues associated with traditional shower models.

The Medi-Shower and the Insert systems have Silver Ion Technology known as Biomaster® embedded into the complete product at the point of its manufacture and is incorporated throughout the manufacturing process. This antibacterial material cannot be wash away or scratched off and will remain fully active for the life of the product. Proven to reduce harmful bacteria such as Legionella, Pseudomonas and MRSA by up to 99.99%.

Reduced Maintenance Requirements

The design of the Medi-Shower head and insert system is proven to provide a more hygienic shower than traditional models. The spray outlet design ensures that dissolved deposits and biofilm pass through the shower head as part of the regular flushing regime. Maintenance requirements are limited to changing of the colour coded insert on a quarterly basis together with a surface wipe don of the shower head and flush through of the shower.

Cost Effective & Sustainable

Medi-Shower has a 5 year life with guarantee when inserts are changed on a quarterly basis. No need for in use and replacement showerheads and no need to replace shower systems on an annual or biennial basis. Following use of the Medi-Flush insert these can be packaged and returned to the manufacturer for recycling , there is Zero waste over the Medi-Shower lifetime.
